Portfolio: <https://0xu53r.github.io/Portfolio>

GitHub: <https://github.com/0xU53R>

SUMMARY

Computer Science undergraduate specializing in cybersecurity, network defense, and secure system development. Hands-on experience in penetration testing, vulnerability assessment, network reconnaissance, and building security-focused tools.

Skilled in Linux environments, networking protocols, and security analysis, with practical experience through cybersecurity projects, CTF challenges, and real-world infrastructure assessments. Seeking a cybersecurity internship opportunity to contribute to threat detection, vulnerability management, and secure infrastructure operations.

EDUCATION

Bachelor of Computer Science (In Progress)

National Institute of Public Administration (NIPA), Lusaka

Expected Graduation: 2029

Grade 12 School Certificate

St. Johns Secondary School, Mongu

Completed: 2023

- **5 O-Level credits including English Language**
-

TECHNICAL SKILLS

Programming Languages:

Python, Go, JavaScript, C, C++, Java

Cybersecurity Tools:

Burp Suite, Metasploit, Wireshark, Nmap

Networking & Systems:

TCP/IP, Linux (Kali Linux), Firewalls, Network Scanning, System Hardening, DNS, HTTP/HTTPS

Security Concepts:

Vulnerability Assessment, Penetration Testing, Digital Forensics, Threat Modeling, MITRE ATT&CK Framework, Security Operations Fundamentals

Development & Infrastructure:

Git, Docker, SQL Databases, CLI Tool Development

CYBERSECURITY PROJECTS

File Hash Checker — Python Security Tool

GitHub: <https://github.com/0xU53R/File-Hash-Checker>

Developed a lightweight file integrity and threat detection tool for verifying file authenticity and identifying known malicious files through cryptographic hashing.

- **Implemented MD5 and SHA256 hash generation for integrity verification**
 - **Developed file comparison functionality to detect unauthorized modifications**
 - **Applied digital forensics concepts for malware analysis and investigation workflows**
 - **Designed a command-line interface for security analysis tasks**
-

Net Hunter — Network Reconnaissance Tool (Go)

GitHub: <https://github.com/0xU53R/net-hunter>

Built a concurrent TCP port scanner designed for fast network reconnaissance and attack surface identification.

- **Implemented multi-threaded scanning using Go goroutines**
- **Developed configurable port ranges, worker limits, and timeout controls**
- **Identifies exposed TCP services during network assessments**

- Demonstrates understanding of networking, enumeration, and security testing techniques
-

CYBERSECURITY EXPERIENCE

Security Analyst (Remote) – welshost.org(startup)

- Performed security assessments on web infrastructure to identify vulnerabilities and potential attack surfaces
 - Conducted reconnaissance and vulnerability scanning using tools such as Nmap and Burp Suite
 - Analyzed security findings and documented recommended mitigation strategies
 - Assisted with improving system hardening practices and reducing security exposure
-

SECURITY TRAINING & PRACTICAL EXPERIENCE

- Active participant in TryHackMe and HackTheBox cybersecurity labs
 - Practice areas include web application security, network enumeration, vulnerability analysis, and defensive security concepts
 - Regularly participate in Capture The Flag (CTF) challenges to improve practical security skills
-

ACHIEVEMENTS

- 4th Place Overall — ZEDBounty BugBounty Drill 2025 (Cybersecurity Competition)
-

CERTIFICATIONS

- Cisco Networking Academy — Introduction to Cybersecurity (2026)
- ISC2 Certified in Cybersecurity (CC) — Candidate (Exam in Progress, 2026)

ADDITIONAL INFORMATION

- **Interested in cybersecurity operations, ethical hacking, threat detection, and secure system design**
- **Strong interest in SOC analyst and penetration testing career paths**
- **Available for cybersecurity internship opportunities**
